# Chapter 1. Introduction

This is the AtlasMap documentation. Please standby, more to come soon.

## **Chapter 2. Terminology**

### AtlasMap terminology

| Term         | Definition  | Example   |
|--------------|---|---|
| AtlasMapping | The top-level mapping file containing the mapping instructions to execute at runtime  | atlasmapping.xml, atlasmapping.json   |
| Audit        | An Audit is informational tracing data captured runtime execution in order to provide user feedback   | Useful during testing cycles, or when user does not have direct access to the runtime logs              |
| Collection   | A data type used in conversion that repeats 0 or more times   | Used to process Arrays and Lists  |
| Data Source  | The definition of an input or output data format within an AtlasMapping file  | atlas:java, atlas:json, atlas:xml, etc  |
| Field        | The base type used to describe a data value used in a Mapping   | JavaField, JsonField, XmlField, etc   |
| Field Action | A function to perform on a given value of an input or output field  | CurrentDate, Trim, SubString, etc   |
| Field Type   | Normalized convention to describe the type of data expected within the value of a field   | String, Integer, Long, Number, Date<br>Time, etc  |
| Lookup Table | A cross reference table used at runtime to define a data conversion that varies based on the value of the input field   | Used for mapping enumerations   |
| Mapping      | A grouping of input Field(s), output<br>Field(s) and optionally Field Action(s)<br>that defines the conversion to be<br>performed at runtime within an<br>AtlasMapping file | JavaField → JsonField, XmlField → JsonField + Uppercase, etc  |
| Mapping Type | The specific type of conversion that should be performed at runtime   | Map, Combine, Separate, Collection or Lookup  |
| Validation   | A Validation is a syntax check of a provide mapping file to ensure execution may proceeed   | Useful during testing cycles, and at runtime to avoid complicated and misleading exception stack traces |

#### AtlasMap Data Format terminology

| Term                   | Definition  | Example                     |
|------------------------|---|-----------------------------|
| Boxed Primitive        | A type of primitive that have a 'null' value  | Integer, Long, Boolean, etc |
| (Unboxed)<br>Primitive | A type of primitive that cannot be 'null' and generally has a default initialized value | int, long, boolean, etc     |

| Term        | Definition  | Example   |
|-------------|---|---|
| Rooted      | JSON documents that have a parent<br>node identifying to contents of the<br>JSON document   | { "Contact": { "firstName": "Yu", "lastName": "Darvish" } }                       |
| Unrooted    | JSON documents that do not have a parent node identifying the contents of the JSON document | { "firstName": "Yu", "lastName": "Darvish" }                                      |
| Qualified   | Xml elements and/or attributes that contain the namespace prefix                            | <ns1:contact <br="" ns1:firstname="Yu">ns1:lastName="Darvish" /&gt;</ns1:contact> |
| Unqualified | Xml elements and/or attributes that do not contain the namespace prefix                     | <contact <br="" firstname="Yu">lastName="Darvish" /&gt;</contact>                 |

## Chapter 3. User Guide

The User Guide documents how programmers will use AtlasMap within their code projects.

## 3.1. Prerequisites

- Required: Java 1.8.0u91
- Recommended: Java 1.8.0u131 (especially for running within a container)

#### 3.2. Maven Instructions

Add the AtlasMap core runtime to the pom.xml

## **Chapter 4. Release Notes**

### 4.1. 2.0.0 Release

- All new modular runtime
- Supported data formats: Java, Json and Xml
- Support for auto-type detection
- Support for auto-type conversion
- Support for Field Actions
- Support for design-time and runtime mapping file Validation rules
- Support for tracking runtime Audits useful for design-time feedback
- Design Time: Support service
- Design Time: Java class inspection service
- Design Time: Xml Schema and Xml instance inspection service
- Design Time: Json instance inspection service
